

The Talkshow Gadget adds radio features to standard live audio mixers.

Bright LED illuminated push buttons for instant mic activation. No need to move the faders once you've got the mix right.

Stereo monitor volume control. Feed your monitor speakers or a headphone amp.

Rugged powder-coated steel enclosure.

Convenient switch for an "external" audio source to your monitors. Perfect for a tuner or stream decoder.

Passive audio circuits use sealed switches and relays with gold contacts.

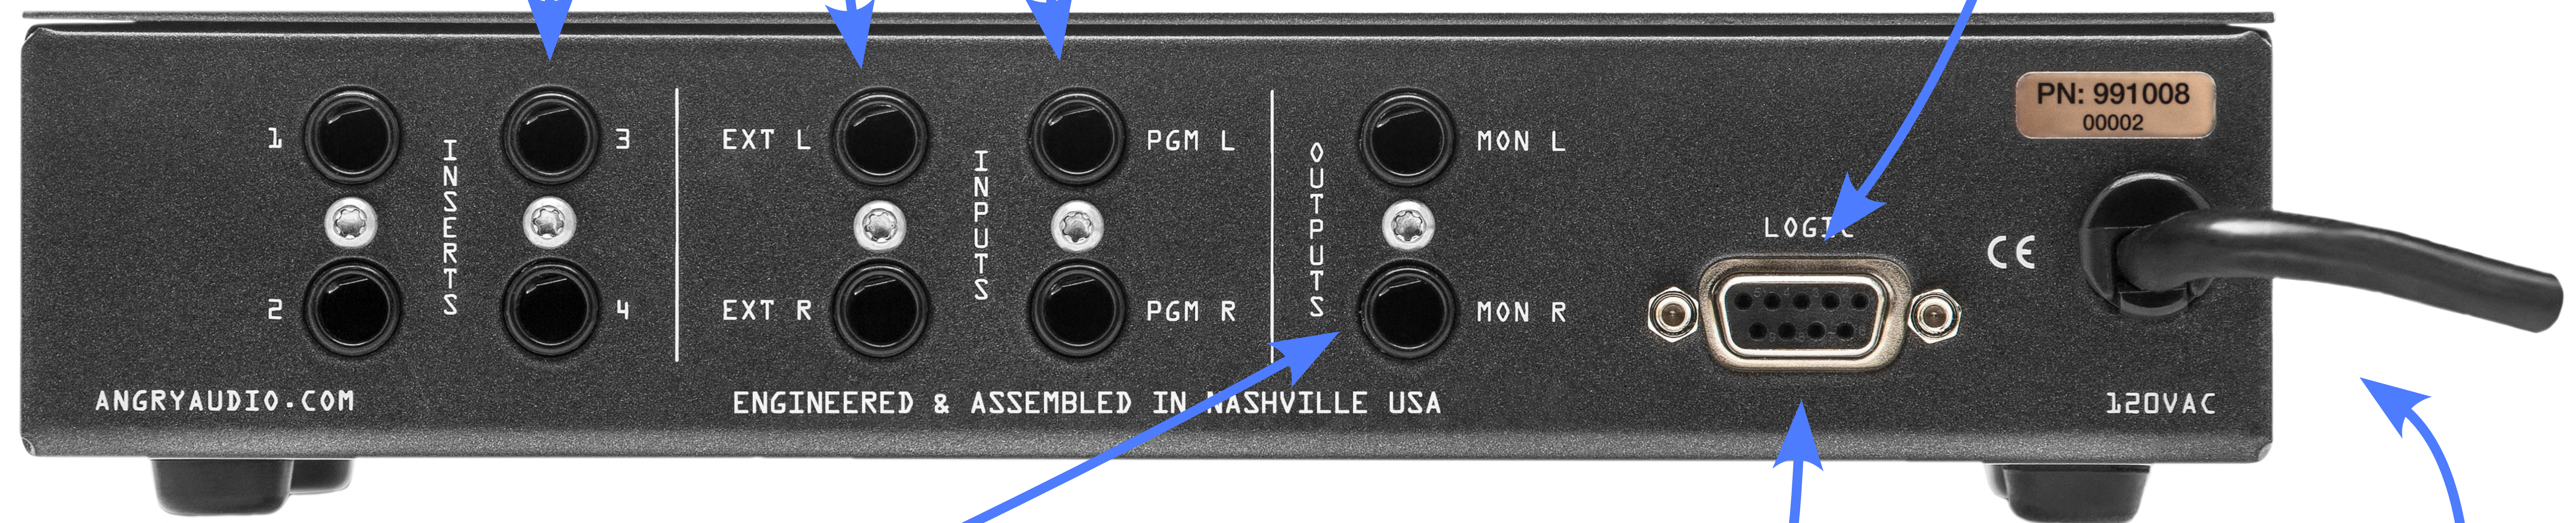

A cable with 1/4" TRS connectors at both ends plug in here and to your mixer's insert jack.

Your external device connects here.

Feed your mixer's stereo mix here.

Contact closures on the logic port can signal an on-air warning sign when mics are active.

All gadgets are immune to RFI.

These outputs normally feed your monitor speakers and will mute automatically when mics are on.

Each mic has a "mute bypass" function on the logic port in case you don't want it to mute the monitors.

Internal power supply. No wall-warts here.
